FoodExpress Restaurant Listing Page

Bug_Analysis_Report

1. Bug ID: BUG-001

Severity: High
Type: CSS / Layout
Description: The restaurant listing section lacks responsive grid behavior, displaying as a single column on all devices instead of 3 columns on desktop and 2 on tablet.
Root Cause: The .restaurants container used display: block; without any CSS Grid system or media queries. Fix Applied: Implemented CSS Grid with a mobile-first approach and added media queries for tablet (768px) and desktop (1024px) breakpoints.
Line #: style.css - .restaurants class and @media queries

2. Bug ID: BUG-002

Severity: High
Type: HTML / Content
Description: Only 3 out of the 6 required restaurants are displayed on the page.
Root Cause: The original HTML code completely omitted the markup and data for Dragon Wok, Taco Fiesta, and Sushi Paradise.
Fix Applied: Added the missing restaurant blocks with their respective images, cuisines, and ratings.
Line #: index.html - <section class="restaurants">

3. Bug ID: BUG-003

Severity: Medium
Type: HTML & CSS / UI
Description: The header does not stay fixed at the top during scrolling, and the required cart icon is missing from the right side.
Root Cause: Missing position: sticky; in the CSS and the cart element was absent from the HTML structure.
Fix Applied: Added a cart icon to the HTML, applied Flexbox to distribute header elements, and added position: sticky; top: 0; to the CSS.
Line #: index.html - <header> and style.css - header

4. Bug ID: BUG-004

Severity: Medium
Type: HTML & CSS / Styling
Description: Premium restaurants (Pizza Palace and Dragon Wok) lack the required "Premium Partner" badge and gold highlighted ratings.
Root Cause: Missing HTML structure for the badge and missing CSS rules for the required #ffd700 hex color.

Fix Applied: Added a Premium Partner element to the premium cards and created CSS rules to color the badge background and rating text gold.
Line #: index.html - .card.premium and style.css - .badge, .premium-rating

5. Bug ID: BUG-005

Severity: Medium
Type: HTML / Content
Description: The footer is incomplete, missing company information, quick links, and social media icons.
Root Cause: The footer only contained a single <p> tag with the company name.
Fix Applied: Expanded the footer HTML structure into three columns using Flexbox and added the requested links, headers, and copyright text.
Line #: index.html - <footer> and style.css - footer

6. Bug ID: BUG-006

Severity: Medium
Type: CSS / UI
Description: Restaurant images and logos are cropped or stretched awkwardly, and the "Order Now" buttons do not align uniformly at the bottom of the cards.
Root Cause: The image styling lacked proper aspect ratio constraints. Additionally, the card container lacked a flex layout to push buttons to the bottom when text content heights varied.
Fix Applied: Updated .card img to use height: 200px and object-fit: contain so images scale correctly without cropping. Applied display: flex; flex-direction: column; to the .card container and margin-top: auto; to the button to align all buttons at the bottom edge.
Line #: style.css - .card img, .card, and .card button

7. Bug ID: BUG-007

Severity: Medium
Type: HTML / Accessibility
Description: All restaurant images are missing the required alt attribute for accessibility.
Root Cause: The original HTML <img> tags only contained the src attribute (e.g., <img src="pizza.jpg">).
Fix Applied: Added descriptive alt attributes to every image tag (e.g., alt="Pizza Palace") to meet the acceptance criteria.
Line #:index.html - Inside .card divs

8. Bug ID: BUG-008

Severity: Low
Type: CSS / Styling
Description: The "Order Now" button uses a generic web color instead of the specific hex code required by the design system.
Root Cause: The original CSS defined the button background as background: green;.

Fix Applied: Updated the button background color to the required hex code #27ae60.
Line #: style.css
