QuickCart Grocery Delivery Portal - Version 2

Feature Implementation Report

Feature 1: Wishlist Functionality UI

i. Added a `<span class="wishlist">` to every product card.
ii. Positioned it in the top-right corner using absolute positioning.
iii. Used CSS to set the default state to a gray empty heart (#7f8c8d) at 24px, and implemented a CSS hover effect to change it to a filled red heart (#e74c3c).

Feature 2: Product Availability Indicator

i. Added an `<span class="availability">` tag below the `<h3>` product name for all 8 products[cite: 19, 20].
ii. Created specific CSS classes (`.in-stock`, `.limited-stock`, `.out-of-stock`) to apply the required green, yellow, and red colors alongside their respective symbols (✓, ⚠, ✗).

Feature 3: Customer Rating System

i. Inserted a `<div class="rating">` below the price and above the "Add To Cart" button on every product card[cite: 19, 20].
ii. Populated each product with its specific star rating and review count from the provided data table.

Feature 4: Top Selling Products Section

i. Created a new `<section class="top-selling">` directly below the Categories section[cite: 19, 20].
ii. Replicated the product cards for Milk, Banana, and Chips, applying a custom blue border and a white background.
iii. Added a `<div class="trending-badge">🔥 Trending</div>` to the top-left corner of these specific cards.
iv. Styled the section background with the requested light blue (#e3f2fd).

Feature 5: Delivery Information Banner

i. Added a `<section class="delivery-banner">` immediately following the hero section[cite: 19, 20].
ii. Styled the banner with a green background (#4CAF50) and white 14px text.
iii. Used Flexbox to display the three guarantees inline on desktop and stacked on mobile.

Feature 6: Responsive Improvements

i. Implemented CSS Grid with `@media` queries to ensure `.products` and `.top-selling-grid` containers display 4 columns on desktop (≥768px), 2 columns on tablet (600-767px), and 1 column on mobile (<600px).
ii. Appended `min-height: 44px;` to all clickable elements (buttons, inputs, category divs) to meet the touch target constraints.
iii. Removed implicit flexbox wrapping conflicts by overriding `.products` display property with CSS grid in the media queries.
