SHRIKARAN P

B.Tech – Computer Science and Engineering
SRM Institute of Science and Technology | 2027

Skills

- Python, Java, C, C++
- Machine Learning & Deep Learning
- SQL, FastAPI, REST APIs
- React, JavaScript, TypeScript
- Git, GitHub, Docker

Projects

Farmer Market Price Prediction

Developed a machine learning model to predict agricultural market prices using historical market data and relevant features.

EEG Motor Imagery Classification

Built a deep learning-based Brain-Computer Interface system using EEG signals to classify motor imagery activities.

Network Intrusion Detection System

Developed a machine learning-based intrusion detection system using the CICIDS2017 dataset to identify malicious network traffic.

Smart Farming AI & IoT

Developed an AI and IoT-based smart farming solution for monitoring agricultural conditions and supporting data-driven farming decisions.

Hostel Outing Permission & Approval System

Built a full-stack role-based application for managing student hostel outing requests, approvals, gate verification, and late-return detection.

Private LLM-OCR ETL System

Developed an AI-based document processing pipeline combining OCR, LLM processing, and ETL techniques for extracting and transforming information from documents.
