Professional Summary

Analytical Computer Science student with a strong foundation in data analysis, machine learning, and problem-solving. Proficient in Python, SQL, and data-driven techniques to extract insights, identify trends, and support business decision-making. Experienced in working with real-world datasets and building models for prediction and optimization. Eager to leverage data to drive business growth, improve performance metrics, and contribute to scalable, insight-driven solutions.

Technical Skills

Programming Languages: C, C++, Python, Java.
AI/ML & Data: AI/ML Applications, CNN-LSTM Modeling, PyTorch, MySQL.
Tools & Environment: Git/Version Control, Full-Stack Development.
Core Competencies: Problem Solving, Analytical Thinking, Team Collaboration.

Educational Qualifications

B.Tech-Computer science engineering(5th semester) May 2023 - May 2027
SRM Institute of science and Technology - Tiruchchirappalli
CGPA - 9.2/10

Professional Credentials & Experience

Foundations of AI/ML – GeeksforGeeks
Gained hands-on experience in data preprocessing, model building, and evaluation techniques

AWS Academy Cloud Foundations – AWS
Learned fundamentals of cloud computing and data storage for scalable data processing

Java Full Stack Development – EduSkill
Built web-based applications with structured data handling and backend integration

Technical Projects

- **Smart Interconnected Water Dam Alert System** — coordinated multi-dam monitoring with GSM/Wi-Fi, predictive flood control, and centralized supervision.
- **Private LLM–OCR ETL Pipeline for Enterprise Data Warehousing** — secure on-premises pipeline for OCR, document extraction, contextual transformation, and structured warehousing.
- **Motor Imagery EEG Classification (BCI)** — preprocessing .gdf EEG signals, STFT spectrogram generation, and CNN-based left/right hand motor imagery classification.
- **Intrusion Detection System using CICIDS2017** — deep learning–based malicious network traffic detection and comparison with rule-based baselines.
- **Smart Academic Timetable Generator** — automated timetable scheduling system that generates conflict-free academic timetables by allocating subjects, faculty, classrooms, and time slots while satisfying institutional constraints and reducing manual scheduling effort.
- **Farmer Market Price Prediction System** — machine learning–based prediction of crop market prices using historical mandi data, seasonal trends, weather conditions, and demand–supply analysis to help farmers decide the best time and market to sell produce.

Research Inrenship(NITT)

- Motor Imagery EEG Classification (BCI) — Worked with BCI Competition IV Dataset 2a and BCI Competition IV Dataset 2b EEG .gdf recordings for motor imagery analysis.
- Preprocessed raw EEG signals, selected motor cortex channels, and generated STFT-based time–frequency spectrogram representations.
- Developed CNN-based models for left/right hand motor imagery classification and subject-wise performance evaluation.
